

Configuration of Bitcoin Wallet

Step by step tutorial for laptop and desktop PC - Linux, Mac, Windows

Download

You can download the installation file from the download section:

https://greenaddress.it/en/wallet.html#/create_warning

Or using the GitHub page of GreenAddress:

<https://github.com/greenaddress/WalletElectron/releases>

Installation

1. Choose the installation file according to your OS.

The available files:

.ApplImage / .dmg / .exe / .asc / .zip / .tar.gz

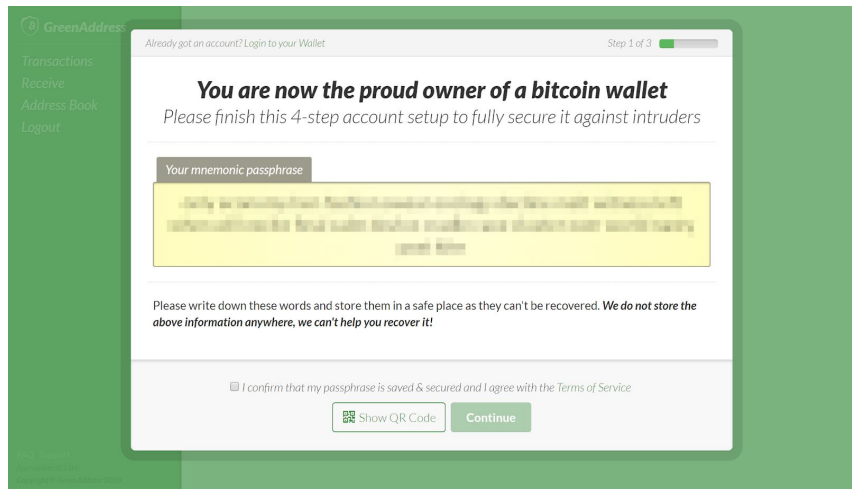

2. Download and install the wallet

3. Launch the Bitcoin wallet

4. Follow the steps below to configure your wallet

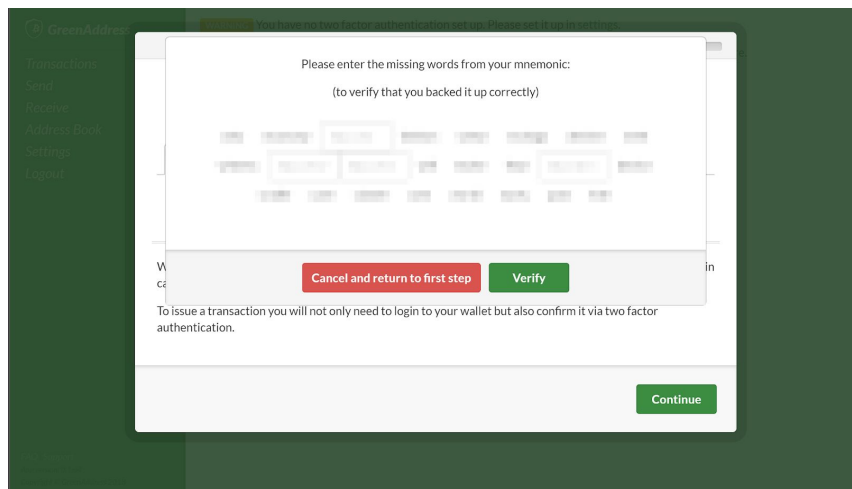

"Once everything is done, you can add the BTC address in your order at BitIreland.ie and receive your Bitcoins"

Step 1

1. Write down your secret phrase
2. Confirm (alternatively see a QR code)
3. Continue to the next step

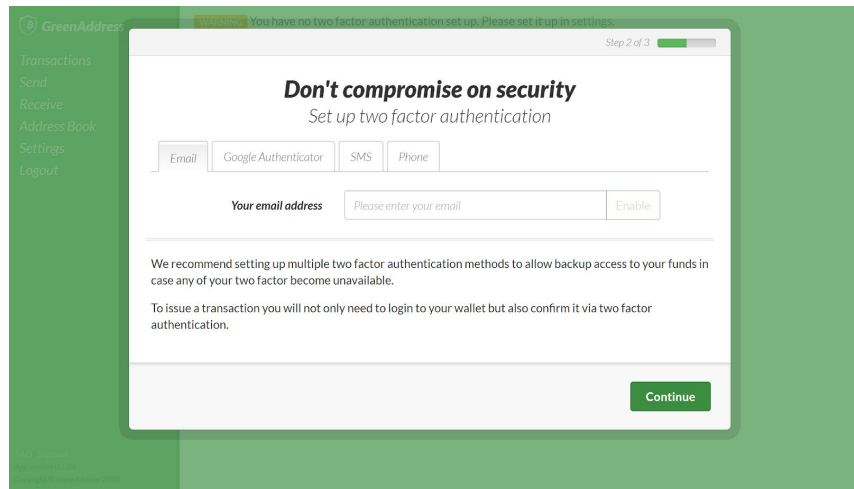

Step 2

It's a challenge to confirm your secret phrase

1. Add the missing words
2. Verify

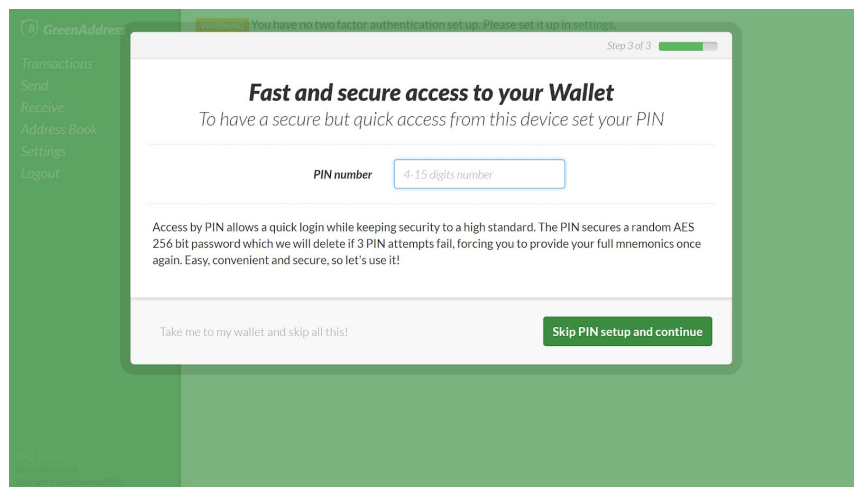

Step 3

Set up 2-factor authentication (optional, but recommended):

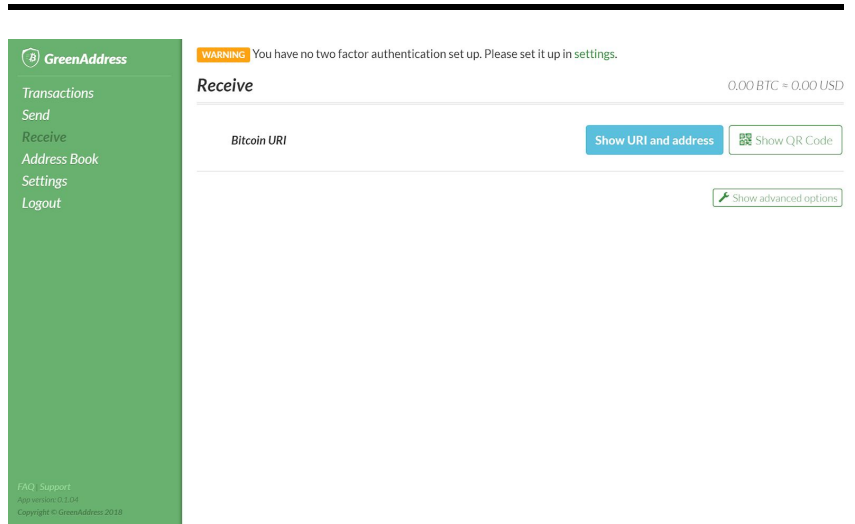

1. Email
2. Google Authenticator
3. SMS
4. Phone call

Step 4

Add a PIN to secure the access to your wallet. You can skip this page, but it's not recommended.

Step 5

WARNING You have no two factor authentication set up. Please set it up in settings.

0.00 BTC = 0.00 USD

Receive

Amount

Bitcoin URI

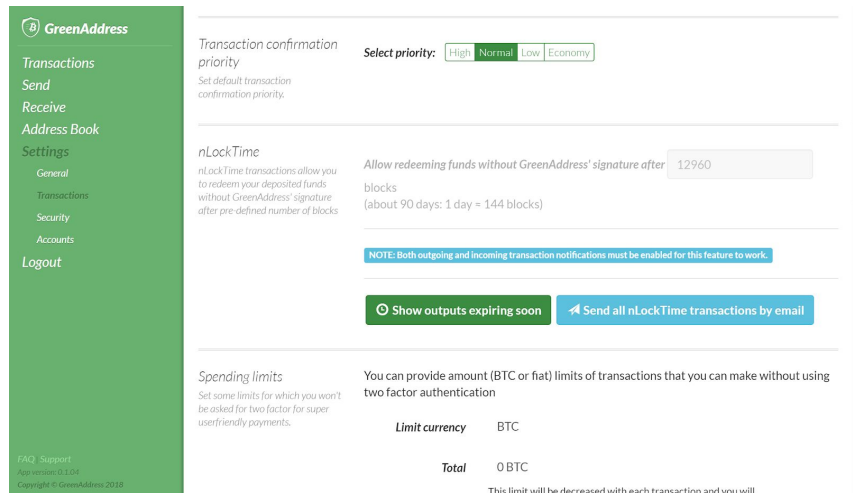

Address

Permanent Payment URL

Private key in WIF or BIP38 format

1. Enter your Bitcoin wallet
2. Get your BTC address
3. Submit the address in your order at BitIreland.ie

Step 6

The screenshot shows the GreenAddress wallet settings interface. On the left is a green sidebar with a menu: Transactions, Send, Receive, Address Book, Settings (selected), General, Transactions, Security, Accounts, and Logout. The main content area is divided into sections:

- Transaction confirmation priority:** A dropdown menu with options: High, Normal (selected), Low, Economy.
- nLockTime:** A section explaining that nLockTime transactions allow redeeming funds without a signature after a set number of blocks. A text input field contains the value "12960". Below it, a note states: "NOTE: Both outgoing and incoming transaction notifications must be enabled for this feature to work." Two buttons are present: "Show outputs expiring soon" and "Send all nLockTime transactions by email".
- Spending limits:** A section explaining that users can set limits for transactions without two-factor authentication. It includes a table:

Limit currency	
	BTC
Total	0 BTC

A note below the table states: "This limit will be decreased with each transaction and you will".

You can add many different settings to your wallet. Just click on settings and configure:

- General settings
- Transactions
- Security
- Accounts
